

SUMMARY

Software Engineer with 5+ years of experience building backend and enterprise applications using Java, Go, Python, and Spring Boot. Experienced in designing REST APIs, distributed workflow systems, concurrency controls, XML processing, deployment automation, and production troubleshooting. Strong experience working across application, database, messaging, and infrastructure layers.

EDUCATION

RNS Institute of Technology (VTU)
Bachelor of Technology in Information Science; GPA: 7.6

Bangalore, India
Aug. 2017 – Aug. 2021

EXPERIENCE

- **HashedIn By Deloitte** Bangalore, India
Senior Software Engineer *June 2024 – Present*
 -
- **Thomson Reuters**
 - * Designed and implemented **priority-aware workflow scheduling** for Jurs APIs, atomically persisting workflow priority during insertion and introducing a DB-backed FIFO waiting queue shared across pods to prevent interactive workloads from being starved by batch processing.
 - * Built the **frontend and backend of a legislation extraction application** using React and Python/FastAPI, integrating with an external extraction service and processing returned XML documents through XSLT transformations to generate structured output for downstream workflows.
 - * Diagnosed cross-environment LegisExtract failures caused by stale deployment configuration and hardened deployment automation with deterministic configuration synchronization, timestamped rollback backups, hostname validation, process lifecycle controls, port checks, and post-deployment health validation.
 - * Implemented **type-ahead search functionality** for the Phoenix application, improving search and navigation across content used for creating, publishing, and managing books, journals, eBooks, and print materials.
 - * Upgraded vulnerable **Log4j and related transitive dependencies** across Java applications to address security vulnerabilities and compliance requirements.
-
- **Broadcom Inc.**
 - * Built and optimized **Go API clients and REST services** integrating with GitLab and GitHub for repository analysis, including circular-dependency detection and automated repository data processing.
 - * Implemented **Jenkins CI/CD pipelines** with automated code scanning across pull requests, branches, and mainline commits, improving consistency and security checks across the development workflow.
- **Oracle Cerner** Bangalore, India
Software Engineer *May 2021 – May 2024*
 - Developed, customized, and resolved feature issues in Oracle Cerner's **Bedrock clinical application** using Java RCP and SWT, including client-specific workflows for the US Department of Defense and federal-agency deployments.
 - Optimized SQL queries and redesigned business logic to resolve critical defects and improve application performance; introduced **application-level locking** to prevent concurrent data modification through the user interface.
 - Independently upgraded Log4j and transitive SLF4J dependencies to mitigate **CVE-2021-44228** and resolved **52 Fortify-reported CVEs** across the application.
 - Added framework-level **RTMS timers** to expose long-running processes through the Olympus portal and built Jenkins pipelines supporting deployments across multiple production and non-production environments.
 - Developed a Python deployment utility integrating Jira and the internal feature-tracking system, automating deployment updates through API integrations and NTLM authentication.

PROGRAMMING SKILLS

- **Languages:** Java, Go, Python, SQL, Bash/KornShell
- **Frameworks:** Spring Boot, Spring MVC, Spring Security, FastAPI, React
- **Databases & Messaging:** Oracle, MySQL, PostgreSQL, JDBC, JMS, ActiveMQ, IBM MQ
- **Tools & Infrastructure:** Git, Jenkins, Linux, REST APIs, CI/CD, JUnit, XML, XSLT
